## **Making Connections**

## Team name or identifier:

Using the information from the <u>Plant Observations</u> chart and any investigation notes from your science notebooks and inquiry circle charts, work with your team to answer the questions below. You may use drawings to illustrate your ideas, but you must include text to explain your answers. Remember to include the evidence that supports your answers!

1. Describe any changes you observed in the plant structures in the four groups of plants you investigated.

2. Using information from your observations and your work in the inquiry circles, why do you think plant groups changed over time?

3. Using your new knowledge about plants, why do you think some plant groups survived, or remained extant, while others died off, or became extinct?
